1. For continuous integration I found the Travis CI tool and prefix are the two tools used by developers.
2. With Travis CI a user can link their repositories to this CI tool as well as build an app. It can also be operated on different machines. Travis CI is also open source. Prefix validates the performance of code and can be used if SQL queries are running too slowly. You can recreate virtual machines after every build.
3. For Travis CI login in to github Travis CI and provide the authorization link through Github. For
4. Travis CI was founded in 2011 and prefix was founded in 2011.
